

# Acupuncture

At Desert AIDS Project, we believe in promoting and supporting the health and wellbeing of our community. Acupuncture, as complementary and alternative medicine, can be used in conjunction with routine conventional medical care to treat a variety of ailments such as:

- chronic migraines
- musculoskeletal joint and soft tissue pain
- peripheral neuropathy
- smoking cessation and more

If you are interested in acupuncture, please consult with your DAP clinician for a referral to acupuncture. You must be a patient of the clinic to be eligible for this service.

Askat Ruzyev
